90

DAY PLAYBOOK

THE HOME SERVICE LEAD ENGINE

The 90-Day Playbook for Capturing, Qualifying, Following Up With, and Converting More Local Leads

A practical operating system for established home service businesses that want more qualified opportunities, faster follow-up, and a more predictable path from inquiry to booked job.

THE FOUR MOVES

01 CAPTURE	02 QUALIFY	03 FOLLOW UP	04 CONVERT
----------------------	----------------------	------------------------	----------------------

Built for plumbing, HVAC, roofing, landscaping, electrical, remodeling, concrete, exterior cleaning, and related trades.

BUILD THE SYSTEM BEFORE YOU SCALE THE TRAFFIC.

CONTENTS

Table of Contents

A simple map of the playbook. Each system opens with what it contains, why it matters, and how the pieces work together.

01	START HERE Big idea, system map, scorecard, quick start, and how to use the playbook.	03-09
02	SYSTEM 1 - CAPTURE THE RIGHT LEADS Qualified-lead definition, qualification matrix, short lead form, tracking, and workflow.	10-17
03	SYSTEM 2 - TURN LEADS INTO APPOINTMENTS Response standards, scripts, follow-up strategy, 21-day sequence, and nurture.	18-25
04	SYSTEM 3 - BUILD LOCAL TRUST + DEMAND Reviews, Google Business Profile, social media, jobsite content, and repeatable formats.	26-40
05	SYSTEM 4 - CREATE PREDICTABLE LEAD FLOW Winning hooks, paid lead campaign structure, Meta form logic, offers, and financing.	41-51
06	SYSTEM 5 - KNOW WHAT IS WORKING KPI scoreboards, weekly operating rhythm, scorecard, and the 90-day implementation plan.	52-60
07	NEXT STEP Build the system before you scale the traffic.	61

[START HERE](#)

More Leads Will Not Fix a Broken Lead System

Before you buy more attention, make sure your business can capture and convert the attention it already earns.

A lot of home service businesses assume growth means getting more leads. Sometimes it does. But if the business does not define a qualified lead, collect useful information, respond quickly, follow up consistently, and turn completed work into proof, new demand leaks out at every stage.

Adding more traffic magnifies both the strengths and the leaks in the system.

OPERATOR NOTE

More traffic is an amplifier. If the system is strong, it creates more opportunity. If the system is weak, it creates more missed calls, stale estimates, and wasted ad spend.

The goal of this playbook: build the operating system behind lead generation first, then increase volume with confidence.

THE MODEL

The Home Service Lead Engine

Every marketing activity should support one measurable path from attention to revenue.

FRONT END
Content, Google, referrals, paid ads, partnerships, and local visibility create attention and inquiries.

BACK END
Qualification, speed, scripts, follow-up, reviews, tracking, and weekly management convert attention into revenue.

CORE RULE
Content, reviews, Google activity, ads, forms, response, and follow-up are not separate goals. They are parts of one lead-generation system.

DIAGNOSTIC

Score Your Current Lead System

Check each statement that is consistently true today - not what the business intends to do.

- We know exactly what qualifies a lead.
 - Our forms ask for the information we actually use.
 - Every lead enters one system the team checks daily.
 - A specific person owns new-lead response.
 - We have a clear response-time standard.
 - We call first and follow up after missed calls.
- Every open estimate has a follow-up sequence.
 - Warm leads remain in nurture after the first three weeks.
 - Completed customers are asked for reviews consistently.
 - Completed work becomes content and proof.
 - We can connect lead sources to jobs and revenue.

SCORE	WHAT IT MEANS	WHERE TO START
0-3	The system is leaking in multiple places.	Start at System 1 and build in order.
4-7	You have a base, but inconsistent execution is costing conversions.	Fix the weakest handoff first: capture, response, or follow-up.
8-11	The foundation is strong enough to optimize.	Focus on demand, measurement, and scaling winners.

BUILD THIS

Write your score at the top of a printed copy. Re-score every 30 days. Improvement should be visible in the system, not only in lead volume.

WHAT YOU GET

What You Will Build Inside This Playbook

This is designed as an implementation resource, not a collection of ideas.

1. QUALIFIED-LEAD STANDARD

Define the location, service, timing, budget, and decision criteria that make an inquiry worth pursuing.

2. SHORT LEAD FORM

Collect enough information to prioritize the opportunity without turning the form into homework.

3. LEAD TRACKER

Use a simple CRM, Meta Leads Center, or shared spreadsheet to make every opportunity visible.

4. RESPONSE SYSTEM

Install a response-time standard plus phone, voicemail, and text templates.

5. 21-DAY FOLLOW-UP

Give high-ticket estimates enough useful touches to stay alive while the customer decides.

6. TRUST ENGINE

Turn reviews, Google updates, and completed jobs into visible proof.

7. DEMAND ENGINE

Build stronger hooks, offers, and paid campaigns after the conversion system is ready.

8. WEEKLY SCORECARD

Track the few numbers that reveal whether marketing is producing actual jobs and revenue.

VALUE FIRST

Use the scripts, checklists, workflows, and visual maps directly. The goal is to reduce the amount of guessing required to build the system.

START PATH

Start With the Problem You Actually Have

Not every business should begin with ads. Start where the leak is.

YOUR BIGGEST PROBLEM	START HERE	WHY
Leads are coming in but not converting	System 2 - Turn Leads Into Appointments	Speed, contact quality, and follow-up usually matter before more traffic.
Growth relies too heavily on referrals	System 3 - Build Local Trust and Demand	Create visible proof and consistent local presence.
You want to increase paid lead volume	System 1, then System 2, then System 4	Build capture and conversion before amplifying demand.
The team is disorganized or leads disappear	System 1 and System 5	Centralize ownership, status, next steps, and measurement.
You get inquiries, but too many are poor-fit	System 1 - Qualification	Tighten the lead definition, form, and offer message.

COMMON LEAK

Buying more traffic before the business has a reliable response and follow-up process can make marketing look like the problem when the actual issue is lead handling.

Fast decision rule: if you cannot tell where every active lead is, who owns it, and what happens next, start with System 1.

90-DAY QUICK START

Install the System in Three Phases

Build the foundation first. Create demand second. Optimize only after the first system is stable.

DAYS 1-30

FOUNDATION

- Define fit
- Capture leads
- Respond fast
- Install follow-up

DAYS 31-60

DEMAND

- Launch one campaign
- Build proof
- Run review push
- Track funnel

DAYS 61-90

OPTIMIZE

- Find winners
- Fix leaks
- Scale carefully
- Measure revenue

DAYS 1-30

Lead definition, form, tracker, response standards, scripts, estimate follow-up, review link, and a basic content rhythm.

DAYS 31-60

Choose one profitable service, launch one campaign, collect more proof, run a review push, and track movement through the funnel.

DAYS 61-90

Identify the best service, creative, offer, and lead source. Fix the largest leak, then increase what is working.

THE STANDARD

Do not scale confusion. Scale a system you can see, manage, and measure.

HOW TO USE THIS

Read Less. Build More.

The guide is intentionally modular. Use the page that solves the current operational problem, then install it.

STEP	ACTION	DONE WHEN
1. DIAGNOSE	Use the scorecard and identify the weakest handoff.	You can name the exact leak.
2. BUILD	Copy the relevant workflow, script, form, or checklist.	The system exists in a place the team can access.
3. ASSIGN	Give one person ownership and a clear standard.	Everyone knows who does what and by when.
4. RUN	Use the system in real leads and jobs.	It survives a normal busy week.
5. REVIEW	Check the weekly scorecard and improve one constraint.	The next change is based on data, not assumptions.

QUICK WIN

If you only implement three pages this week, build the lead tracker, response standard, and 21-day estimate follow-up. Those three systems make every future lead more valuable.

Keep a printed copy near the person responsible for inbound leads, or store the PDF inside the company SOP library. Revisit the weekly pages every Friday.

SYSTEM 1

Capture the Right Leads

Before increasing lead volume, define what a good opportunity looks like and make sure every inquiry enters one visible process with useful context.

WHAT'S INSIDE

- Qualified-lead definition
- Qualification matrix
- Short lead-form blueprint
- Lead-form anatomy and confirmation flow
- CRM-free lead-management options
- AI prompt for a lead tracker
- Lead status workflow

HOW THIS HELPS

- Reduces time wasted on poor-fit inquiries
- Gives the team one shared definition of priority
- Makes every lead visible instead of living in texts or inboxes
- Creates the foundation required before adding more traffic

HOW THE PIECES WORK TOGETHER

SYSTEM OUTCOME

Every inquiry enters the same process with enough information to prioritize it, a current status, and a clear next action.

SYSTEM 1 / QUALIFICATION

Define a Qualified Lead

A lead is qualified when it meets the standards your business sets - not simply because someone filled out a form.

Your definition should reflect the work the business actually wants more of. That keeps marketing, office staff, sales, and field teams aligned on what deserves priority.

BUSINESS FACTORS	LEAD FACTORS
Minimum job value	Location
Most profitable services	Service requested
Crew availability	Timeline
Travel distance	Budget range
Seasonality	Decision-maker status
Project complexity	Ability to schedule

EXAMPLE

A landscaping company may prioritize installation projects above a defined project value. A plumber may qualify an emergency repair primarily by location, urgency, and problem type. The standard must match the business model.

BUILD THIS

Write a one-sentence qualified-lead definition your entire team can use without interpretation.

VISUALIZER

Build a Simple Qualification Matrix

Use this as a starting point, then replace the example language with your own thresholds.

FACTOR	GREEN - PRIORITY	YELLOW - REVIEW	RED - NOT A FIT
Service area	Inside primary area	Edge of travel radius	Outside active area
Service fit	Core profitable service	Secondary service	Not offered
Timeline	Ready / defined timing	Future or researching	No realistic timing
Budget	Fits typical range	Unclear / needs education	Clearly below minimum
Decision status	Decision-maker involved	Influencer only	No authority / no path
Next step	Willing to talk / schedule	Needs more info	Refuses contact

OPERATOR NOTE
Do not use budget questions to embarrass or pressure people. Use them to route opportunities, set expectations, and protect team capacity.

Priority is not the same as worth. A lead can be a good future prospect without being the right job for the current schedule. Use statuses that preserve that distinction.

SYSTEM 1 / LEAD CAPTURE

Build a Short Lead Form

Collect enough information to prioritize the lead without making the first step feel like an application.

RECOMMENDED FIELDS Name Phone number Email City or ZIP Service needed Project timeline Project budget range Short description Optional photo upload	BEST QUALIFIERS Timeline As soon as possible Within 30 days Within 1-3 months More than 3 months away Still researching Budget Use ranges that match the service and include "Unsure" when appropriate.
---	--

COMMON LEAK
A 30-question intake may collect more data but can reduce the number of qualified people willing to complete it. Get the lead first; collect detail during the call or appointment.

Rule: every field must earn its place. If the answer does not change prioritization, routing, or the next conversation, consider removing it.

LEAD FORM ANATOMY

Make the Form Feel Easy to Finish

The form should move from low-friction facts to project context, then immediately reduce uncertainty about the next step.

STEP	BLOCK	WHAT TO ASK
1	BASIC CONTACT	Name, phone, email, city.
2	PROJECT FIT	Service, timeline, budget range.
3	CONTEXT	One short description + optional photo.
4	CONFIRMATION	Explain what happens next and when.

COPY + USE

Thank you for contacting [Company]. We received your request and will review the project details. A member of our team will contact you within [response window].

Before publishing: complete the form from a phone, confirm every notification arrives, test the phone number and photo upload, verify the customer confirmation, and make sure the lead is stored somewhere the team checks.

BUILD THIS

Submit one test lead every time the form, website, ad, automation, or notification routing changes.

SYSTEM 1 / LEAD MANAGEMENT

You Do Not Need a Complicated CRM to Start

CRM means customer relationship management system. The point is visibility and consistent follow-up - not expensive software.

OPTION 1 - META

Use Instant Forms to capture leads inside Facebook or Instagram. Review them in Leads Center or Business Suite, apply status labels, and use an after-hours auto-reply.

OPTION 2 - GOOGLE SHEETS

Use one shared sheet. Add status dropdowns, a next follow-up date, lead source, estimate value, and final job value. Keep a small summary area for weekly review.

START SIMPLE

The right system is the one the team updates every day. A clean spreadsheet used consistently is more valuable than software nobody maintains.

Minimum requirement: every active lead needs a current status and a next action. If either is missing, the system is incomplete.

COPY + USE

Build Your Lead Tracker With an AI Assistant

Paste this prompt into your preferred AI assistant, then create the sheet in the tool your team will actually use.

PROMPT

Create a simple Google Sheets lead tracker for a home service business. Include columns for date received, customer name, phone number, email, city, service requested, project timeline, project budget, lead source, qualified or not qualified, contact attempts, appointment date, estimate amount, current status, next follow-up date, won or lost, final job value, and notes.

Add dropdown menus for lead status with these options: New Lead, Contact Attempted, Qualified, Appointment Scheduled, Estimate Sent, Follow-Up Needed, Won, Lost, and Not a Fit.

Add simple color coding for quick review and a summary section showing total leads, qualified leads, appointments, estimates sent, jobs won, close rate, total revenue, and revenue by lead source. Keep the layout simple enough to update from a phone or computer.

LEAD	PROJECT	FOLLOW-UP	RESULT
Name / Phone	Service / City	Last contact	Qualified?
Date received	Timeline / Budget	Next follow-up	Estimate amount
Lead source	Project notes	Contact attempts	Won / Lost
Email	Appointment date	Current status	Final job value

TRACK THIS

The summary at the top should answer one question fast: where are leads turning into appointments, estimates, jobs, and revenue - and where are they stalling?

LEAD STATUS WORKFLOW

Give Every Lead a Current State

A status system prevents “I thought someone called them” from becoming the default lead-management process.

Daily Meta workflow: open Leads Center or Inbox, review city/service/timeline/budget, call the lead, send a short follow-up if unanswered, apply the correct status, set the next follow-up date, and end the day with no unreviewed leads.

BUILD THIS
Create one end-of-day rule: no new lead can remain unreviewed, unlabeled, or without a next action.

SYSTEM 2

Turn Leads Into Appointments

Once a lead raises their hand, speed and consistency matter. This system turns a new inquiry into a structured contact process instead of a one-call attempt.

WHAT'S INSIDE

- Response-time standards
- First-contact call sequence
- Phone, voicemail, and text scripts
- High-ticket follow-up principles
- Complete 21-day follow-up cadence
- Copy-and-use follow-up templates
- Long-term nurture messages

HOW THIS HELPS

- Protects the value of each lead while interest is high
- Creates consistent follow-up across the team
- Keeps high-ticket opportunities alive while buyers compare options
- Makes the next step clear without relying on pressure

HOW THE PIECES WORK TOGETHER

SYSTEM OUTCOME

Good leads receive fast, useful contact and a clear path from inquiry to appointment, estimate, and decision.

SYSTEM 2 / SPEED

Respond While Interest Is High

A clear response standard protects the value of every lead your marketing earns.

LEVEL	RESPONSE TIME	HOW TO USE IT
Best	Within 5 minutes	Use when a dedicated person is available during business hours.
Strong	Within 30 minutes	A practical operating goal for many small service companies.
Maximum operating standard	Within 2 business hours	Use only when faster response is not consistently possible.
After hours	Automatic reply, then early next business morning	Set a clear expectation and follow through.

FIRST-CONTACT SEQUENCE

Call first. If there is no answer, leave a short voicemail when appropriate, send a text or Messenger message, try again later the same day, then make another attempt the next business day.

COPY + USE

Phone, Voicemail, and Missed-Call Scripts

The first contact should make the next step easy: answer a question, schedule a visit, or confirm the project is a fit.

INBOUND PHONE

Hi [Name], this is [Team Member] with [Company]. I saw that you requested information about [service] in [city]. I wanted to reach out while I had your request in front of me. Do you have two minutes to tell me what you are hoping to get done?

VOICEMAIL

Hi [Name], this is [Team Member] with [Company]. I am calling about your request for [service]. I will send you a quick text as well. You can call or reply whenever it is convenient.

MISSED-CALL TEXT

Hi [Name], this is [Team Member] with [Company]. I just tried calling about your [service] request in [city]. Would you prefer a quick call, or would it be easier to coordinate here by text?

APPOINTMENT CLOSE

Based on what you shared, the next step is [site visit / diagnostic / estimate]. We have [option one] or [option two] available. Which works better?

SYSTEM 2 / HIGH-TICKET FOLLOW-UP

Why Good Projects Need More Than One Touch

Large projects involve more perceived risk, more comparison, and often more people in the decision.

A homeowner may be comparing bids, talking with a spouse, moving funds, reviewing financing, evaluating warranty and scheduling, or waiting on another part of the project. Silence does not automatically mean the opportunity is dead.

WHAT CHANGES THE DECISION

- Scope clarity
- Materials
- Timing
- Warranty
- Financing
- Proof from similar work

WHAT NOT TO DO

Do not send the same "Have you decided?" message repeatedly. Each follow-up should reduce uncertainty, add proof, answer a question, or make the next step easier.

FIELD STANDARD

For higher-ticket estimates, Lusso Media uses a structured 21-day active follow-up window with multiple useful touchpoints, then moves the lead into longer-term nurture. Adjust the cadence to your sales cycle and customer preferences.

21-DAY FOLLOW-UP

The Complete High-Ticket Sequence

The point is not more messages. The point is a better reason to re-enter the conversation each time.

DAY	PURPOSE	VALUE TO SEND
0	Deliver and summarize	Clear scope, recommended solution, next step
1	Confirm receipt	Make sure the proposal opened correctly
3	Answer questions	Scope, materials, timing, warranty
6	Add proof	Review, testimonial, similar project, financing
10	Check timing	Confirm whether the project timeline changed
15	Make the decision easier	Scheduling, financing, adjusted scope
21	Close active follow-up	Leave the door open for long-term nurture

AFTER DAY 21

Move the lead into a 30-, 60-, or 90-day follow-up list. Use seasonal reminders, financing information, relevant project examples, or availability updates.

COPY + USE

Follow-Up Templates: Days 0, 1, and 3

Early follow-up should reduce friction and make the proposal easier to understand.

DAY 0 - DELIVER THE ESTIMATE

Hi [Name], I just sent the estimate for your [project type]. It includes the recommended scope, materials, and next steps. Take a look when you have a chance, and let me know if you would like us to walk through any part of it with you.

DAY 1 - CONFIRM RECEIPT

Hi [Name], I wanted to make sure the estimate for your [project type] came through correctly. Were you able to open it?

DAY 3 - ANSWER QUESTIONS

Hi [Name], I wanted to check whether any questions came up after reviewing the estimate. I am happy to clarify the scope, materials, timing, warranty, or anything else that would help you compare your options.

OPERATOR NOTE

Personalize the message when the project has a specific concern, decision-maker, deadline, or financing question. Relevance is more valuable than volume.

COPY + USE

Follow-Up Templates: Days 6, 10, 15, and 21

Later follow-up should add proof, clarify timing, and reduce decision friction.

DAY 6 - ADD PROOF

Hi [Name], I wanted to share a recent [project type] we completed that was similar to yours. It may help you see how the process and finished result came together. [Link or photos]

DAY 10 - CHECK THE TIMELINE

Hi [Name], I wanted to check in on the timing for your project. Are you still hoping to move forward within [their timeline], or has anything changed?

DAY 15 - SCHEDULING OR FINANCING

Hi [Name], we are planning our upcoming schedule and wanted to check whether you would like us to hold a possible project window. We can also provide financing information or adjust the scope if that would be helpful.

DAY 21 - FINAL ACTIVE FOLLOW-UP

Hi [Name], I wanted to send one final follow-up on the estimate for your [project type]. I will keep the information on file in case the timing is not right yet. Reach out when you are ready, and we will be happy to review availability and next steps.

LONG-TERM NURTURE

Stay Useful Without Becoming Repetitive

After active follow-up ends, stay relevant to the project, season, or service.

30 DAYS

Hi [Name], I wanted to check whether the timing for your [project type] has changed. We recently completed a similar project and thought the example might be useful. [Link]

60 DAYS

Hi [Name], I am checking in on the [project type] you were considering. If budget or scope is still the main question, we can review options that may fit the project better.

90 DAYS

Hi [Name], we are updating our upcoming project schedule and wanted to see whether your [project type] is still being considered. Let us know if you would like an updated timeline or estimate review.

USE GOOD JUDGMENT

Stop active follow-up when the customer asks. Respect communication preferences. Long-term nurture should feel useful, not automated for its own sake.

SYSTEM 3

Build Local Trust and Demand

Completed jobs should not disappear when the invoice is paid. This system turns real work, customer experiences, Google activity, and crew visibility into proof that compounds locally.

WHAT'S INSIDE

- Review campaign and request scripts
- Manual and automated review workflows
- Review-response guidance
- Google Business Profile activity system
- Google photo organization routine
- Simple social media cadence
- Jobsite shot list and privacy rules
- Crew-led content and recurring series
- Repeatable content-format matrix

HOW THIS HELPS

- Builds trust before a prospect ever calls
- Turns completed work into future marketing assets
- Strengthens local proof across Google and social platforms
- Makes content easier because the business documents work already being done

HOW THE PIECES WORK TOGETHER

SYSTEM OUTCOME

The market repeatedly sees the quality, process, people, and customer outcomes behind the business - creating more trust and future demand.

SYSTEM 3 / REVIEWS

Run a Review Campaign

Make the process easy, timely, and respectful. The best time to ask is after the customer has experienced the result.

ASK WHEN Job is complete Customer has confirmed satisfaction Any active concern is addressed Direct review link is ready	ACTIVE SEQUENCE Completion day - first request 3 days later - light reminder 7 days later - final active reminder Quarterly - revisit eligible past customers
MAXIMUM REMINDERS Use no more than three total review requests in the active campaign. This keeps the experience respectful and reduces message fatigue.	

Important: only ask after the business has had a fair chance to address any active concern. Review generation should strengthen trust, not pressure a customer.

COPY + USE

Review Request Messages

Keep the language simple. Make the link easy to use. Do not script what the customer should say.

INITIAL REQUEST

Hi [Name], thank you for choosing [Company] for your [service]. Would you be willing to leave a short Google review about your experience? Your feedback helps other local homeowners feel more confident choosing our team. [Review Link]

REMINDER ONE

Hi [Name], I wanted to resend the review link in case the first message got buried. We appreciate your business and any feedback you are willing to share. [Review Link]

FINAL REMINDER

Hi [Name], thank you again for choosing [Company]. This will be our final reminder, but we would sincerely appreciate a short review if you have a moment. [Review Link]

PAST-CUSTOMER CAMPAIGN

Hi [Name], we are reaching out to customers we served during the past year. If you were happy with your [service], would you be willing to share a short Google review? We appreciate the opportunity to have worked with you. [Review Link]

REVIEW CAMPAIGN SETUP

Manual or Automated - Both Can Work

Choose the system the business can maintain consistently.

NO-COST MANUAL Direct Google review link Saved text templates Google Sheets tracker Calendar reminders 10-20 past customers per week	AUTOMATED Review software such as NiceJob or similar Automatic SMS and email requests Reminder sequence Stop after review Optional website review display
--	---

Past-customer lookback: begin with customers served during the previous 12 months. Exclude anyone with an unresolved concern.

TRACKER FIELD	WHY IT MATTERS
Customer / service / completion date	Confirms eligibility and context
First request + reminder dates	Prevents over-messaging
Review received + rating	Stops the sequence and tracks results
Response posted	Ensures the business closes the loop publicly
Permission to reuse	Separates a public review from ad/testimonial usage permission

REVIEW RESPONSES

Reply to Every Review

A response is another public trust signal. Keep it calm, specific, and professional.

POSITIVE REVIEW

Thank you, [Name]. We appreciate the opportunity to help with your [service] in [city]. Our team is glad you were happy with the process and result.

NEUTRAL REVIEW

Thank you for the feedback, [Name]. We appreciate the opportunity to serve you. We are reviewing your comments with the team so we can continue improving the customer experience.

NEGATIVE REVIEW

Hi [Name], thank you for bringing this to our attention. We would like to understand the situation and work toward a fair resolution. Please contact [name/phone/email] so we can review the details directly.

IMPORTANT

Do not argue publicly, reveal customer details, or admit legal responsibility in a public reply. Move detailed discussion to a private channel.

SYSTEM 3 / GOOGLE

Keep Google Business Profile Active

A complete, current profile helps local customers understand what the company does and see recent proof of work.

EVERY 1-2 WEEKS Upload completed-job photos Add before, during, and finished images Show team, trucks, tools, and clean jobsites Respond to new reviews	KEEP CURRENT Business hours Phone number Website Service area Primary category Individual services
--	---

EXAMPLE - PLUMBING SERVICES
Water heater repair, drain cleaning, sewer line repair, leak detection, water softener installation, and tankless water heater installation. List major services individually when the platform allows it.

BUILD THIS
Assign one person a recurring calendar task to review the profile. "We should update Google more" is not a system.

GOOGLE PHOTO SYSTEM

Name, Organize, and Reuse Completed-Job Proof

Good organization makes it easier to publish consistently across Google, social media, proposals, and follow-up.

FILE-NAMING FORMULA

[city]-[service]-[project-description].jpg

EXAMPLE FILE NAME	USE
cedar-city-concrete-driveway-installation.jpg	Finished project / local proof
st-george-hvac-system-replacement.jpg	Replacement / before-after
cedar-city-water-heater-installation.jpg	Service-specific proof
st-george-roof-repair-before-after.jpg	Transformation
hurricane-utah-xeriscape-landscaping.jpg	Location + service context

DO NOT OVERSTATE THIS

Descriptive file names are a sensible organization and accessibility practice. They support a complete profile, accurate services, strong photos, reviews, and a useful website - they do not replace those fundamentals.

GOOGLE CHECKLIST

Monthly Google Business Profile Review

Use this page as the recurring maintenance routine.

- Confirm the primary category is accurate.
- Add or update individual services.
- Confirm every service area is correct.
- Upload new completed-job photos.
- Add team and equipment photos.
- Respond to every new review.
- Check business hours and holiday hours.
- Verify the website and phone number.
- Review customer questions and answers.
- Remove outdated offers or information.

RECOMMENDED RHYTHM

Upload completed-job photos at least every two weeks. Businesses with frequent jobs can update weekly. The goal is current proof, not posting for the sake of activity.

TRACK THIS

Do profile views, calls, website visits, direction requests, and branded searches trend upward while the profile becomes more complete and current? Use the metrics available in your account.

SYSTEM 3 / SOCIAL

Build a Simple Social Media System

Post at least three times per week using a repeatable mix of proof, education, and people.

CONTENT TYPE	PURPOSE	EXAMPLES
Proof	Show the result	Testimonial, before/after, finished project
Education	Answer a real question	FAQ, what to expect, common mistake
People	Build familiarity	Behind the scenes, crew personality, day in the life

Say what the video is about. Include the city or service area, the service, the problem, and the outcome. Do not make the platform or the viewer guess.

WEAK
Another great project finished today.

CLEAR
We replaced a cracked concrete driveway for a homeowner in Cedar City, Utah. The project included removal, base preparation, reinforcement, a new pour, and drainage corrections.

PRINCIPLE
People buy from people. A recognizable crew can build more trust than a feed made only of logos and finished-job clips.

LIGHT SHOT LIST

What to Capture on Every Job

The work itself already contains the raw material for proof-based content.

BEFORE + DURING

- Wide view of the site
- Close-up of the issue
- Crew arriving
- Tools and equipment
- Short explanation of the plan
- Setup and preparation
- Main work
- Close-up detail
- Crew interaction

AFTER

- Finished wide shot
- Finished detail
- Before-and-after angle
- Short walkthrough
- Crew reaction
- Customer reaction, with permission
- One sentence explaining the result
- Clean jobsite

POINT OF VIEW

Meta glasses or a phone-mounted point-of-view angle can place the viewer inside the work. Use it to show what the technician sees, explain a repair step, or reveal the finished result.

KEEP IT SAFE

Do not film while driving, operating dangerous equipment, or performing work that requires full attention. Privacy and safety outrank content.

PRIVACY RULES

Protect the Customer and the Crew

A content opportunity is never more important than privacy, safety, or the customer relationship.

- Ask the homeowner before filming or posting.
- Allow the homeowner to decline all content.
- Do not show house numbers.
- Blur or avoid license plates.
- Do not show children without written parental permission.
- Do not reveal alarm systems, access codes, valuables, or private documents.
- Do not publicly criticize the condition of the property.
- Do not make employees feel monitored.
- Let camera-shy employees film instead of appearing.
- Get permission before using a testimonial in advertising.

CUSTOMER TRUST COMES FIRST

Make filming permission part of the jobsite culture, not an awkward surprise. Participation should be optional for both customers and employees.

COMMON LEAK

Using a great project as content without clear permission can create more reputational risk than marketing value. Protect the relationship first.

CREW-LED CONTENT

Turn Ordinary Workdays Into a Content System

The people already on payroll may be the most local audience the business can access.

Employees live, shop, attend school events, and know people inside the service area. When crew members genuinely enjoy the content and share it, the business can reach local networks through familiar faces.

MAKE THE CREW RECOGNIZABLE

- Consistent shirts or uniforms
- First names when comfortable
- Recurring series
- Voluntary filming
- Friendly competition
- Simple rewards when appropriate

MAKE IT SURVIVE BUSY SEASON

The content must already be happening during an ordinary workday. If every video requires a separate shoot day, perfect lighting, and a long script, the system will eventually stop.

BUILD THIS

Choose one recurring crew format that can be recorded in under two minutes per job. Repeat it until the audience recognizes it.

CREW SERIES

Two Repeatable Proof Formats

Recurring series create familiarity and proof without reinventing content every week.

Series 1 - Worst Thing We Found Today

The employee who finds the most unusual or serious issue records it. Keep the tone educational - never insulting to the homeowner.

TRADE	"WORST THING WE FOUND TODAY" EXAMPLE
Plumbing	Worst pipe repair or drain blockage found today
HVAC	Dirtiest filter or most neglected outdoor unit
Roofing	Worst roof damage or hidden leak source
Concrete	Worst base preparation or slab failure
Electrical	Most dangerous panel or wiring issue

Series 2 - The Board

Create a running count of completed jobs. Show the finished project, have the employee say the job number, use a repeatable ending, and do not over-edit. Examples: Roof 151. Water heater 208. Driveway 73. HVAC replacement 96. Electrical panel 124.

WHY IT WORKS

Repetition becomes proof. Over time, customers see volume, consistency, and familiar crew members.

CREW SERIES

Nominate a Neighbor

Once per month, invite local people to nominate someone else for a clearly defined service or improvement.

POSSIBLE VERSIONS

- Yard cleanup
- Gutter cleaning
- Small plumbing repair
- HVAC tune-up
- Electrical safety check
- Roof inspection
- Defined concrete or exterior-cleaning service

GUARDRAILS

- ☐ Set a maximum service value.
- ☐ Do not allow self-nominations.
- ☐ Get written permission.
- ☐ Protect addresses, plates, and children.
- ☐ Do not publish sensitive nomination details.
- ☐ Allow the recipient to decline filming.

THE SHARING MECHANIC

A nomination naturally starts a private conversation between local people. The community story should matter more than the promotion.

OPERATOR NOTE

Use a defined scope and real capacity limit. If the business cannot operationally fulfill the offer without disrupting paid work, reduce the scope before promoting it.

CONTENT FORMAT MATRIX

Use Formats You Can Repeat

A clear phone video with a useful answer often creates more trust than an overproduced video with no specific message.

FORMAT	SIMPLE STRUCTURE
Customer testimonial	Problem -> why they chose the company -> experience -> result
Frequently asked question	Question -> clear answer -> what affects the answer -> next step
What to expect	Before appointment -> during work -> after completion -> preparation
Behind the scenes	Arrival -> problem -> process -> crew -> result
X reasons why	State the number -> explain each reason -> give the next step
Us vs. them	Compare processes or standards without insulting competitors
Transformation	Before -> process -> finished result -> reaction
Problem vs. solution	Show issue -> explain cause -> show fix
Myth vs. fact	State belief -> correct it -> explain why it matters
Cost factors	Explain what changes price without pretending every job is the same
Mistake to avoid	Show mistake -> consequence -> better approach

BUILD THIS

Choose three formats for the next 30 days: one proof format, one education format, and one people/process format. Consistency beats novelty.

SYSTEM 4

Create Predictable Lead Flow

After capture, response, and follow-up are working, increase demand intentionally. This system connects attention, offers, paid campaigns, and financing to the lead engine behind them.

WHAT'S INSIDE

- Local ad hook formulas
- Proof and transformation hooks
- 30-second ad structure
- Controlled paid lead campaign framework
- Meta lead-form setup logic
- Pre-launch paid lead checklist
- Offer decision drivers and architecture
- Three practical offer types
- Financing presentation and compliance reminders

HOW THIS HELPS

- Makes advertising easier to measure
- Improves relevance before a prospect enters the form
- Builds value without relying on constant discounts
- Connects ad spend to qualified leads, appointments, jobs, and revenue

HOW THE PIECES WORK TOGETHER

SYSTEM OUTCOME

One profitable service, one clear offer, one local audience, multiple creative variations, and a measurable path from attention to revenue.

ATTENTION

Winning Ad Hook Formulas

The hook should make the right local customer stop because the message feels immediately relevant.

AUDIENCE CALLOUT

Formula: If you are [audience], pay attention.

Examples:

Cedar City homeowners, if you are thinking about redoing your landscaping, pay attention.

St. George homeowners, if your air conditioner is struggling in the heat, pay attention.

Cedar City homeowners, if you are planning to replace your driveway, pay attention.

CAUSE-BASED HOOK

Formula: Most [audience] experience [problem] because [reason].

Example: Most Cedar City homeowners with cracked driveways focus on the surface, but the real issue may begin underneath with base preparation or drainage.

REASON YOUR PROBLEM KEEPS HAPPENING

Formula: The reason your [problem] keeps happening is [cause].

X REASONS WHY

Examples: Three reasons your landscaping may be using more water than necessary. Four signs your roof should be inspected before winter.

PROOF + TRANSFORMATION

More Hooks + a 30-Second Ad Structure

Use hooks that make the problem visible, then move quickly into proof and the next step.

TESTIMONIAL

"We had been putting this project off for two years because..."

Transformation: "This Cedar City backyard went from unused dirt to a finished patio and low-maintenance landscape."

PROBLEM VS. SOLUTION

"The problem was water collecting against the foundation. The solution started with correcting the grade and drainage."

30-SECOND AD	WHAT TO DO
1. Call out the audience	Name the local person the ad is for.
2. Name the problem or desired result	Show the pain or the outcome in plain language.
3. Show process or proof	Use jobsite footage, crew, materials, testimonials, or finished work.
4. Explain the next step	Tell them what information to submit and what happens after.
5. Close clearly	Use one direct CTA such as Request Estimate or Check Availability.

DO NOT LEAD WITH PRICE

Project budgets vary. Lead with the result, proof, process, financing, risk reduction, or a useful offer unless price itself is the strategic message.

PAID LEAD CAMPAIGNS

Start With One Controlled Test

Paid ads should be easy to read in the numbers: what you spent, who responded, who qualified, who booked, and what revenue came back.

ONE TEST

- One service
- One service area
- One clear offer
- Two or three creative variations
- One lead form
- One response owner

TEST BUDGET

Choose a daily budget the business can afford to test without emotional decision-making. In some local service campaigns, \$50/day can be a practical starting point, but project value, demand, competition, margin, service area, and sales capacity should determine the final number.

FIELD BENCHMARK - NOT A PROMISE

For some projects under roughly \$10,000, Lusso Media has observed qualified-lead costs in the \$35-\$50 range. Results vary materially by service, market, season, offer, creative, follow-up, and qualification standards.

TRACK BEFORE YOU SCALE

Set up lead source, qualified-lead status, estimate value, and final job value before increasing spend.

META LEAD FORM SETUP

General Setup Without Screenshots

Platform interfaces change. Use this as the durable logic of the setup rather than a button-by-button dependency.

STEP	ACTION
1	Create a Leads campaign in Meta Ads Manager.
2	Choose Instant Form as the lead location.
3	Select the Facebook Page and Instagram account.
4	Choose the service area and campaign budget.
5	Create two or three ad variations.
6	Build a short form with contact, service, timeline, and budget.
7	Add a clear privacy policy link.
8	Write a confirmation screen that explains the next step.
9	Test the form on a phone.
10	Confirm where the lead will be reviewed and tracked.

NO CRM REQUIRED

Meta Leads Center can be used as a native lead-management option. A Google Sheet can also serve as the main tracker if the team keeps it current.

BUILD THIS

The confirmation screen should tell the lead exactly what happens next, including the expected response window.

PAID LEAD CHECKLIST

Before the Campaign Goes Live

A campaign is not ready because the ads look good. It is ready when the complete lead-handling system is ready.

- Choose the service the business wants more of.
- Confirm the service is profitable.
- Confirm crew capacity.
- Define the service area.
- Set timeline and budget qualifications.
- Prepare strong project proof.
- Write the lead form.
- Assign one person to respond.
- Set the response-time goal.
- Prepare call, text, and follow-up templates.
- Decide how every lead will be labeled.
- Track estimates and jobs won, not only form submissions.

GO / NO-GO RULE

If response ownership, qualification, follow-up, or revenue tracking is missing, delay scaling until those pieces exist.

OPERATOR NOTE

Creative can be improved while the campaign runs. A broken handoff is harder to diagnose because it makes good traffic look bad.

OFFER ARCHITECTURE

Build an Offer Around the Buying Decision - Not Just the Discount

A stronger offer helps the right homeowner understand why the service matters, why this contractor is credible, what happens next, and why moving forward makes sense.

THE 6 OFFER DECISION DRIVERS

01 CUSTOMER PRIORITY

Does the problem or desired result matter enough to this customer?

Start with a problem, frustration, or desired change the homeowner actually cares about. A stronger offer does not manufacture importance - it connects the service to an existing priority.

02 SERVICE FIT

Are we presenting the right solution to the right homeowner?

The service, customer, property, location, timing, and problem should align. A strong offer begins with relevance before persuasion.

03 PROOF & CONFIDENCE

What gives the homeowner a credible reason to believe this contractor can deliver?

Examples: Completed work; relevant reviews; expertise; clear process; specific expectations; legitimate warranties.

04 EASE TO START

Is the next step obvious, understandable, and reasonably simple?

Examples: Clear qualification; simple scheduling; understandable process; clear next steps; no unnecessary form friction.

05 RISK & UNCERTAINTY

What concerns, ambiguity, or perceived downside could stop the decision?

Examples: Unclear scope; surprise-cost concerns; scheduling uncertainty; workmanship concerns; confusing expectations; unclear warranty or authorization process.

06 REASON TO ACT

Is there a legitimate reason to solve the problem now rather than indefinitely postpone it?

Use real timing, availability, seasonality, capacity, incentives, consequences, or project circumstances when relevant. Never manufacture urgency or scarcity.

PRESSURE-TEST THE OFFER

Before launching a campaign, ask:

- | | |
|--|--|
| ☐ Does the customer care enough about the problem? | ☐ Is the next step easy to understand? |
| ☐ Is this the right service for this customer? | ☐ Have major sources of uncertainty been reduced? |
| ☐ Is there enough proof to make the claim believable? | ☐ Is there an honest reason to act now? |

A strong offer does not need to win every category perfectly. The purpose of this check is to expose weak points before ad spend amplifies them.

GUARDRAIL

Use real scarcity and real urgency only.

Capacity limits, seasonal timing, promotional windows, manufacturer incentives, scheduling constraints, and legitimate deadlines may create reasons to act.

Never invent deadlines, fake availability, or false scarcity.

OFFER TYPE 1

Paid Diagnostic Credited Toward Repair

This filters low-intent inquiries while lowering the perceived risk of paying for clarity.

FORMULA
Comprehensive diagnostic for \$X + apply the full fee toward approved repairs

TRADE	EXAMPLE
Plumbing	Complete Plumbing Diagnostic for \$79. Approve the repair and the full \$79 is credited toward the work.
HVAC	\$89 Cooling-System Performance Test. Apply the fee toward a recommended repair completed during the visit.
Electrical	\$99 Home Electrical Safety Assessment. Apply the full fee toward approved electrical work.

WHY IT WORKS
The customer is paying for a useful diagnosis, not merely for someone to arrive. The credit reduces the downside of moving forward while preserving qualification.

CUSTOMIZE
Set the fee and scope from real labor, travel, diagnostic depth, and economics. The examples above are templates, not market-wide pricing recommendations.

OFFER TYPE 2

No-Surprise Price Protection

Many homeowners delay calling because they fear losing control of the final bill. Sell predictability instead of cheapness.

FORMULA

Upfront written price + no open-ended hourly surprises + no work without authorization

CUSTOMER-FACING VERSION

Know the price before we start. You receive a written, upfront price before work begins. No additional work is completed without your approval.

STRONGER VERSION

The price you approve is the price you pay. If the defined scope does not change, neither does your price.

Why it works: it reduces an important form of risk: uncertainty. It also differentiates on process and transparency instead of pushing the business into a race to the bottom.

IMPORTANT

Make sure the actual estimating, change-order, and authorization process can support the promise before advertising it.

OFFER TYPE 3

Useful Service-Related Bonuses

The best bonus improves the main result and has a controlled cost to fulfill.

FORMULA
Purchase the core service + receive a related, high-value bonus with a controlled fulfillment cost

SERVICE	RELATED BONUS
HVAC installation	Smart thermostat with professional installation
Water heater installation	Whole-home water-pressure test + upgraded emergency shutoff valve
Roof replacement	Defined annual roof-health inspections for a stated period
Landscaping	First seasonal irrigation adjustment + winterization service
Garage-door replacement	Wi-Fi controller + professional setup

WHY IT WORKS
A useful service upgrade can create more perceived value than a random gift card because it strengthens the core outcome.

CONCRETE EXAMPLE
Options include documented base preparation and warranty details, a defined decorative upgrade, a small adjoining pad or walkway section, or a curing/maintenance package. Do not advertise “crack-free concrete.” Define warranty coverage, exclusions, time limits, and remedy clearly.

FINANCING

Present Financing Clearly

Financing can make a necessary project easier to consider, but the message must stay accurate and compliant with the financing provider.

WHERE TO MENTION IT

- Service pages
- Estimate forms
- Estimate follow-up
- Paid ads when approved
- Proposal / estimate documents
- Appointment conversations

PLAIN-LANGUAGE MESSAGE

Financing options may be available for qualifying projects.
Ask our team for current terms and application details.

FOLLOW-UP MESSAGE

Hi [Name], if project timing is being affected by budget, financing options may be available. I can send the current information so you can decide whether it is worth reviewing.

IMPORTANT

Do not advertise specific monthly payments, rates, approvals, or terms unless they are current, accurate, and permitted by the financing provider. Use required disclosures.

SYSTEM 5

Know What Is Working

The final system turns lead generation into a management process. Track the few numbers that expose the biggest leak, review them on a fixed cadence, and improve one constraint at a time.

WHAT'S INSIDE

- Lead-to-revenue KPI scoreboard
- Cost-per-qualified-lead logic
- Weekly lead operating rhythm
- Printable weekly scorecard
- 90-day implementation plan
- Final build-order checklist
- Legal and source notes

HOW THIS HELPS

- Shows where leads stall instead of guessing
- Connects marketing activity to jobs and revenue
- Creates a repeatable weekly decision cadence
- Prevents scaling a broken stage of the funnel

HOW THE PIECES WORK TOGETHER

SYSTEM OUTCOME

A weekly operating rhythm that turns marketing data into specific decisions about what to fix, increase, or stop.

KPI SCOREBOARD

Track the Numbers That Matter

A cheaper lead is not automatically a better lead. Follow each source deeper into the revenue path.

NUMBER	WHAT IT MEANS
Total leads	Everyone who called, messaged, or submitted a form
Qualified leads	Leads that meet the business standard
Appointments	Qualified leads that scheduled the next step
Estimates sent	Formal proposals delivered
Jobs won	Approved projects
Cost per qualified lead	Ad spend divided by qualified leads
Close rate	Jobs won divided by estimates sent
Revenue by source	Project revenue connected to the lead source
Average response time	How quickly new leads receive first contact

DO NOT STOP AT COST PER LEAD

A source that produces fewer but better-qualified leads can outperform a cheap source that creates low-intent volume. Track appointments, estimates, jobs, and revenue.

TRACK THIS

At minimum, every Friday know: qualified leads, appointments, estimates, jobs won, close rate, revenue won, average response time, and best lead source.

WEEKLY OPERATING RHYTHM

The Weekly Lead Routine

Use the same cadence every week so lead generation becomes an operating process, not a collection of marketing tasks.

DAY	FOCUS	ACTION
Monday	Review	Check new leads, open estimates, crew capacity, and overdue follow-ups.
Tuesday	Follow up	Contact open estimates and unanswered leads. Update every status.
Wednesday	Create proof	Capture project photos, a short video, and one useful explanation.
Thursday	Build demand	Post content, update Google when due, and contact referral partners.
Friday	Measure	Count qualified leads, appointments, estimates, jobs won, and revenue.

- Add every lead to the system.
 - Contact new leads quickly.
 - Follow up on every open estimate.
 - Post at least three times.
- Capture proof from active jobs.
 - Ask completed customers for reviews.
 - Check where the best leads came from.

BUILD THIS
Put the Friday review on the calendar now. A weekly scorecard that is actually reviewed is more useful than a perfect dashboard nobody opens.

WEEKLY SCORECARD

Print or Copy This Page

Use the same definitions every week so trends are meaningful.

METRIC	THIS WEEK	LAST WEEK	NOTES
Total leads			
Qualified leads			
Appointments			
Estimates sent			
Jobs won			
Revenue won			
Average response time			
Reviews received			
Posts published			
Best lead source			

Friday review questions

- Which source created the strongest leads?
- Which service received the most interest?
- How many leads were contacted within the response goal?
- Which estimates need follow-up next week?
- What should be repeated, improved, or stopped?

90-DAY IMPLEMENTATION

Days 1-30: Build the Foundation

Do not rush to scale. Make sure every lead can be captured, qualified, contacted, and assigned a next step.

- Define the qualified-lead standard.
- Create the short lead form.
- Choose Meta Business Suite or Google Sheets as the lead system.
- Assign responsibility for new leads.
- Set the response-time standard.
- Save first-contact and follow-up scripts.
- Set up the 21-day estimate sequence.
- Create the review link and campaign.
- Organize completed-job photos.
- Begin posting three times per week.

GOAL

Every lead is captured, qualified, contacted, and assigned a visible next step.

30-DAY REVIEW

Can the system survive a busy week without the owner personally remembering every lead? If not, fix ownership and visibility before adding more volume.

90-DAY IMPLEMENTATION

Days 31-60: Create Consistent Lead Flow

Now that the back end is working, increase demand with one focused service and one measurable campaign.

- Choose one profitable service to promote.
- Prepare two or three ad creatives.
- Build the Meta lead form.
- Launch one controlled test budget.
- Review leads daily.
- Upload Google Business Profile photos every two weeks.
- Run the first past-customer review campaign.
- Start one crew content series.
- Track qualified leads, appointments, estimates, and jobs won.

GOAL

Create a measurable flow of qualified estimate opportunities.

60-DAY REVIEW

Which source and creative produce the strongest qualified leads - not simply the most form submissions?

90-DAY IMPLEMENTATION

Days 61-90: Improve What Works

Optimization means identifying the largest constraint, improving it, and measuring what changed.

- Review which service produced the strongest leads.
- Review which creative produced the best qualified leads.
- Improve the form if lead quality is weak.
- Improve response time if leads are going cold.
- Review estimate close rate.
- Use winning testimonials and project examples in new ads.
- Expand only after the first system is stable.
- Calculate revenue by lead source.
- Decide what to increase, maintain, or stop.

GOAL

Know which actions create real jobs and where the next marketing dollar should go.

90-DAY REVIEW

Do not expand because a campaign "feels good." Expand after the business can see the full path from source -> qualified lead -> estimate -> job -> revenue.

FINAL CHECKLIST

What to Build First

Keep the order. More lead volume should be added after the business can respond, qualify, follow up, and measure results.

ORDER	SYSTEM
1	Qualified-lead definition
2	Short lead form
3	Lead tracker
4	Response standard
5	First-contact scripts
6	21-day estimate follow-up
7	Review campaign
8	Google Business Profile routine
9	Three-post weekly content system
10	One paid lead campaign
11	Weekly scorecard

THE OPERATING PRINCIPLE

Build the system before you scale the traffic. Then scale only what the numbers show is working.

LEGAL + SOURCE NOTES

Use These Recommendations Responsibly

This guide is an educational operating resource, not legal, tax, lending, insurance, or trade-specific professional advice.

- Advertising, financing, warranties, and promotional offers may be subject to federal, state, local, trade, lender, insurer, and platform requirements.
- Warranty language should be reviewed by the company's attorney, insurer, or qualified trade professional before publication.
- Financing claims and disclosures should be approved by the financing provider.
- Get customer permission before filming, publishing, or using testimonials in advertising.
- Protect addresses, license plates, children, private documents, and sensitive property details.
- Do not use false scarcity, false reviews, misleading before-and-after images, or guarantees the business cannot support.
- Tool features, prices, and platform steps may change. Confirm current settings before implementation.

Framework references used in shaping this edition

Lusso Media field processes and the original Home Service Lead Generation Guide; Alex Hormozi's \$100M Leads for lead-magnet and acquisition principles; official platform guidance for Meta lead tools, Google Business Profile, and relevant social-platform features. This resource uses original Lusso Media copy and implementation examples rather than reproducing those books.

FIELD BENCHMARKS

Any lead-cost ranges, cadence examples, or operating benchmarks attributed to Lusso Media are observations from prior campaign work and internal protocols. They are not guarantees of future performance.

NEXT STEP

Build the System. Then Decide What to Scale.

You now have the architecture, scripts, checklists, and operating rhythm to build a stronger lead engine.

If this guide exposed a gap, do not rebuild everything at once. Pick the single handoff losing the most value, install the corresponding system, and review it for two weeks.

DO IT IN-HOUSE

Use this playbook as the operating manual. Assign ownership, install the workflows, and review the weekly scorecard until the system is reliable.

GET HELP INSTALLING IT

Lusso Media helps established home service businesses build and operate the strategy, content, advertising, landing pages, lead tracking, follow-up, reviews, and reporting behind predictable demand.

THE LUSO MEDIA STANDARD

The goal is not more marketing activity. The goal is a clearer system that turns market attention into qualified opportunities, revenue, and local authority.

Use the contact path on the page where you downloaded this guide to request a Lead Engine Review.

Built for established local service businesses that want stronger authority, more predictable demand, and less dependence on founder memory or ad-hoc marketing.
